ENVIRONMENT ART PORTFOLIO

What the Alley Remembers

有些地方，从不忘记。
它只是静静地，等下一个故事。

“What the Alley Remembers” is an environment project exploring a semi-inhabited alley where traces of past activity coexist with a quieter present. The space reflects a transition some shops remain in use while others have been left behind, with residential life continuing above. The scene focuses on subtle storytelling through environmental details and mood.

Through this project, I developed my skills in environment asset creation, texturing, and scene storytelling, while gaining practical experience working across Autodesk Maya, Substance Painter, and Unreal Engine within a collaborative pipeline.

I established the visual direction by selecting and developing the concept, designing the architectural elements, and curating the assets within the environment. I modeled the environment assets in Autodesk Maya, created and applied textures in Substance Painter, and handled UV unwrapping and packing for props and selected assets. I also contributed to the rendering animation.

The final environment was assembled in Unreal Engine, with contributions to the render animation, followed by environment layout, lighting setup, and technical UV unwrapping and packing for building assets handled by my collaborator https://dakshmahalwar.artstation.com .
